27 July 2012

Pathology of Non-Epithelial Ovarian Tumours

Venue: Birmingham Cytology Training Centre

Birmingham Women's Hospital, Birmingham B15 2TG

This course is aimed at consultants and trainee pathologists who are preparing for their final FRCPath examination. The objective is to provide a pragmatic approach when dealing with complex ovarian tumours of non-epithelial origin. Formal lectures on sex cord stromal, germ cell, metastatic and unusual ovarian tumours by Dr Marisa Nucci, Prof Michael Wells and Dr Nafisa Wilkinson will be supplemented by case presentations, which will encompass differential diagnoses, diagnostic pitfalls and the use of immunohistochemical markers for this problematic group of tumours. The course is being held in the Birmingham Cytology Training Centre which can accommodate only a limited number of participants. Early registration is strongly recommended

To book a place please contact Amanda Lugg: amanda.lugg@bwhct.nhs.uk
